SUMMARY

Senior Software Engineer with 6+ years of experience building analytics applications, backend systems, REST APIs, and data driven software solutions using Python. Experienced in developing interactive dashboards, data driven applications, and workflow automation solutions that support business operations and decision making. Strong background in SQL, cloud native development, application architecture, and translating stakeholder requirements into scalable production software. Proven track record delivering analytics solutions, operational and financial workflow automation, and enterprise applications across Azure and GCP environments.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript

Backend & APIs: FastAPI, Flask, REST APIs, Backend Services

Analytics & Data: Dash, SQL, Data Analysis, Data Visualization, Pandas, NumPy

Databases: MySQL, MongoDB

Cloud & DevOps: Azure, GCP, Docker, CI/CD, Azure DevOps, GitHub Actions

Frontend: HTML, CSS, Vue.js

AI & Automation: LLM API Integration, Workflow Automation, AI Enabled Applications

WORK EXPERIENCE

Senior Software Engineer | Independent Software Engineering | June 2025 - Present

- Design and deliver full stack applications and backend systems using Python, FastAPI, and cloud native architectures.
- Build business applications supporting document workflows, operational processes, and analytics dashboards.
- Develop scalable backend services and REST APIs to support application integrations and workflow automation.
- Implement AI enabled features using LLM APIs for conversational interfaces and document processing workflows.
- Develop automation capabilities for data processing and business operations.
- Integrate third party APIs and external services to extend application functionality.
- Build and deploy containerized applications using Docker across cloud environments.

Senior Software Engineer (Python) | RWE Clean Energy Services, LLC | June 2021 - June 2025

- Developed analytics applications, backend systems, and reporting solutions supporting operational, engineering, and financial business workflows.
- Built Python based backend services and REST APIs for enterprise applications and internal platforms.
- Designed and maintained software solutions used for operational analysis, reporting, and business decision support.
- Built Python Dash applications providing interactive data visualization, reporting, monitoring, and operational insights for business stakeholders.
- Automated financial and operational modeling workflows, reducing manual effort by approximately 70%.
- Optimized SQL queries and database interactions to improve application performance and responsiveness.
- Designed and deployed scalable applications using FastAPI, Docker, and Azure cloud infrastructure.
- Implemented CI/CD pipelines using Azure DevOps and GitHub Actions, improving deployment consistency and release efficiency.
- Collaborated with cross functional stakeholders to translate business requirements into production ready software solutions.

Cloud Software Engineer | UNC | August 2020 - May 2021

- Developed and deployed containerized Python applications on Google Cloud Platform, including Cloud Run, BigQuery, and Cloud Storage.
- Built backend services supporting machine learning experimentation and research workflows.
- Developed APIs for data processing, model execution, and workflow orchestration.
- Automated machine learning environment setup and experimentation processes, reducing manual configuration effort and improving development efficiency.
- Collaborated with researchers and engineering teams to support cloud based data and analytics initiatives.

Software Developer / Java Developer | Multiple Clients | February 2016 - April 2019

- Developed backend modules and business functionality for enterprise banking and financial services applications.
- Built Java based web applications using Spring Framework and related enterprise technologies.
- Designed and implemented backend services supporting customer facing and internal business operations.
- Improved application performance by up to 30% through code optimization and system enhancements.
- Participated in Agile software development teams delivering production software for enterprise clients.
- Collaborated with developers, analysts, and business stakeholders throughout the software development lifecycle.

PROJECTS

PreLegal - AI Powered Legal Document Drafting | Python, FastAPI, Docker, Claude, CI/CD, Git

- Built and deployed a full stack SaaS platform that uses conversational AI to draft professional legal agreements in minutes. Supports 11 document types including NDAs, Data Processing Agreements, and HIPAA Business Associate Agreements; all based on Common Paper open standards vetted by 40+ attorneys.
- Implemented with FastAPI, Next.js, and Moonshot AI via OpenRouter. Includes real user authentication, document persistence, PDF export, and a fully automated CI/CD pipeline via GitHub Actions deploying to Render.

Loss Ratio Prediction for Auto Insurance | Python, Pandas, Docker, GCP, Scikit-Learn

- Developed a machine learning project using an auto insurance dataset to predict loss ratios for insurance policy portfolios.
- Performed data preparation, exploratory analysis, feature engineering, and model evaluation using regression techniques.
- Applied the CRISP-DM methodology to structure the project lifecycle from business understanding through model evaluation.
- Deployed supporting infrastructure using Docker and Google Cloud Platform.

Bank Marketing Analysis | Python, Pandas, Scikit-Learn

- Performed data preprocessing and analysis, evaluated fairness metrics to identify potential bias in datasets.

Housing Price Prediction App | Python, Docker, GCP

- Built and trained a machine learning model and deployed the application to Cloud Run using automated CI/CD pipelines.

EDUCATION

M.S. Computer Science (Data Science) | May 2021

University of North Carolina Charlotte

B.E. Computer Engineering | May 2015

University of Mumbai
